Product Overview

The Bulletin 592 Overload Relay is a manual reset, eutectic alloy, thermal type overload device. When coordinated with the proper short circuit protection, the overload relay is intended to protect the motor, motor controller, and power wiring against overheating due to excessive overcurrents.

All Bulletin 592 block type relays are furnished with an optical indicator that becomes visible when the relay has tripped. A manual contact test module is provided as standard on block type Bulletin 592 overload relays. One N.O. or N.C. auxiliary contact may be field added to block type Bulletin 592 overload relays. This extra contact module physically replaces the contact test module.

Product Selection

The tables in this section list selection information for the 592 Overload relay. These overload relays require heater elements. See publication 592-TD010 for heater element selection information.

Eutectic Alloy Type—Manual Reset, Starter Mount

- for installation on Bul. 500 NEMA contactors
- requires three heater elements
